

GREEN FACTS

According to Cornerstone Renewables:

The Average Cow produces 40kg of manure per day, which is able to create 2 KWH of electricity. We're adding an average of 350KG* of dog poop per week – thanks to you and

your pets!

Anaerobic Digestion reduces our farms environmental footprint by 30%. This process is able to produce food sustainably for the long term by creating electricity, heat, fertilizer, and animal bedding from the system.

Organic Waste accounts for 50% of the waste generated in Ontario. That's 3,000,000 tonnes or 300,000 full garbage trucks.

Diverting All of Canada's Organic Waste from landfill to anaerobic digesters would result in a 37 megaton reduction of CO2 in the atmosphere per year.

AT POOP-PATROL ... WE GET IT!

*Monitor our Sustainability Calculator to see our poop progress.
